How to Associate Reed KumoSensor

**Step 1.** Reed KumoSensors are shipped with battery installed; but to reduce waste, there is no battery insulation tape to pull out.

The matching magnet is placed in the opposite orientation and on the **right** side in package.

**Step 2.** Rotate the magnet so that the logo are aligned in the same orientation, place it on the **left** side of the main sensor element.

**Step 3.** Move the magnet in contact with the Reed KumoSensor and then away. A LED light should start flashing for about 2 minutes. Search and associate during that time.
